BCM Resources: Summer Exploration Program

BCM Resources Corporation (TSX-V: B) announces details of the summer exploration program for its BC molybdenum properties.

The company has contracted EDCON-PRJ to fly a detailed Airborne Magnetic Data Acquisition and Processing program at the Shan South, Shan North, Lorne property and the most recently acquired McRae claim group. The total Shan survey will encompass 514 line-kms, the Lorne survey 325 line-kms and the McRae claim group 766 line-kms. The survey layout specifications are; Flight Lines: N-S, 100 meter line spacing. Tie lines: E-W, 400 meter line spacing. Elevation drape: approximately 100 meters nominal terrain clearance.

To compliment the aero-mag data the company will also carry out detailed mapping, rock, soil and silt sampling at the aforementioned properties. Results from this exploration program should generate high-quality diamond drill targets for drilling scheduled to commence later this summer.

The spring camp at Shan South has been de-mobilized and will be moved to Shan North. This location will better support drilling activities on both locations. The Winter Drill programs (Phase I & II) completed a total of 36 holes totaling 9,413 meters. The results of Holes 1 thru 27 have been reported while results from the remaining holes are pending.
